

Reliability Diagram

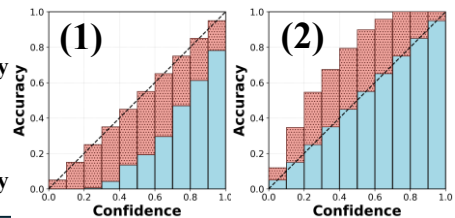

- Output** : Empirical accuracy of predictions falling in each confidence bin (bar height)
- Gap** : Difference between predicted confidence and empirical accuracy within each bin.
- ECE** : Bin-frequency-weighted mean of $|\text{confidence} - \text{accuracy}|$.

(1) Overconfident

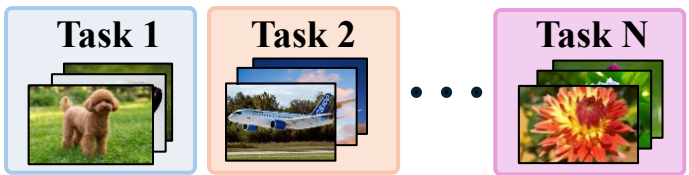

Confidence < Accuracy

(2) Underconfident

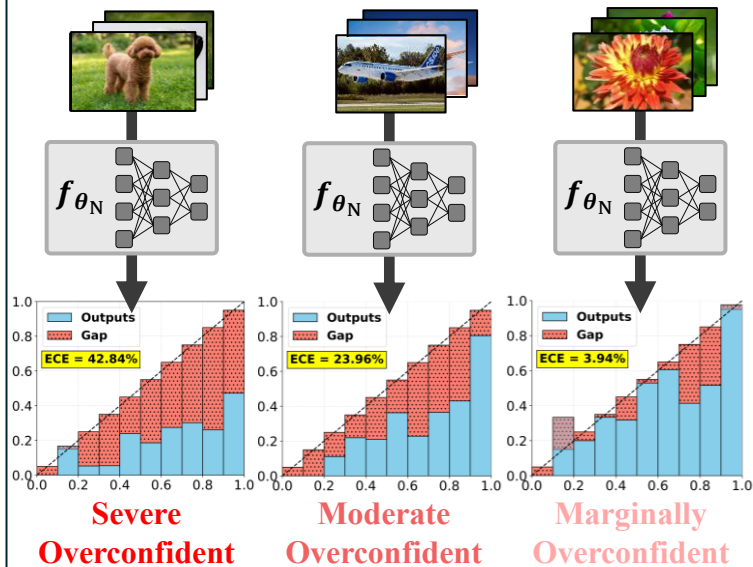

Confidence > Accuracy

Class-Incremental Learning

Task N Model Inference

(a) Asymmetric Miscalibration in Class Incremental Learning
